

## Indicators

The following indicators/data items are displayed for the selected cause of death:

- Age standardized death rate per 100 000
- Crude death rate per 100 000
- Absolute number of deaths
- % of all deaths
- Population

The age-standardized rate is calculated using the direct method and European Standard population structure (see below). This indicator is calculated only in the main table of option B.

European Standard population:

Age	< 1	1-4	5-9	10-14	15-19	20-24	25-29	30-34	35-39	40-44	45-49
Weight	0.016	0.064	0.07	0.07	0.07	0.07	0.07	0.07	0.07	0.07	0.07
Age	50-54	55-59	60-64	65-69	70-74	75-79	80-84	85+			
Weight	0.07	0.06	0.05	0.04	0.03	0.02	0.01	0.01
